

Purified Water To Go

Eastar **TM** Resin Reusable Bottles

We have had numerous requests from our customers to provide an inexpensive bottle that is both reusable again and again but at the same time in the unlikely event the bottle is thrown away, can be easily recycled.

Recently a new product has become available that fits both these criteria, Eastar **TM** resin. This product is FDA approved and NSF 51 certified. Virtually all major personal bottle manufacturers are now using the Eastman Chemical material; however as has always been the case our product is substantially less expensive.

Purified Water to Go has focused on products that are reusable and thus reduce plastic landfill waste. We are delighted to be able to offer products using a material that offers complete reusability and yet is easily recyclable in the unlikely event a consumer decides to discard their bottle and does not contain BPA.

FAQS

1. Does this material contain BPA? NO! BPA is not used to produce this material.
2. Is this Bottle rigid? Yes, it is a glass like material that holds its shape and will not shatter.
3. Is it easy to drink from with a sports cap? Because the material is glass like, it cannot easily be squeezed. In order to achieve a smooth water flow, Purified Water to Go offers this product with its unique air intake cap.
4. Does this material carry a "7" recycle code? No, although it is reusable and glass like, it is wholly unique in that it carries a "1" recycle code. In the unlikely event these bottles are discarded, they are easily recyclable.
5. How do I clean the bottle? We hand wash ours with detergent or vinegar or baking soda and tap water. Dishwashers with temperatures over 120 degrees may warp the bottle. The cap, of course, can be cleaned in a dishwasher.
6. I'm not sure I want to use plastic of any kind? This is of course a FMC not a FAQ but we hear this from time to time. Our goal lies in providing litter free alternatives to single use or limited use plastic bottles. The Eastar **TM** resin bottles provide an inexpensive reusable alternative for eco conscious consumers. If however you want non plastic alternatives, Purified Water to Go offers a complete line of 304 food grade stainless steel bottles.
